The Grays Currency

"Methodically Planned Tokenomics"

- No broken promises. The dapp, dao, staking and token smart contracts are 100% complete.
- Truly decentralized.
- 100% autonomous.
- 100% deflationary.
- Set total token supply: 333,333,333,333.
- Staking with no time constraints or early withdrawal penalties.
- Fully decentralized amplifier tokens adding constant perpetual volume.
- Voluntary Time Locking (Delayed Gratification & Additional Rewards).
- Freedom to collect rewards without breaking stake or time lock.
- Earn high APY reflection rewards based on market volume.
- Perpetual auto buy and burns of (PTGC) with each transaction on chain.
- Auto LP add with each transaction locked within the (PTGC/PLS) V1 PLSX LP.
- Contract built with an ever-rising LP floor.
- Liquidity Pool web mechanics in place adding perpetual volume with each transaction.
- Burn address, marketing wallet, and main liquidity pool are excluded from the rewards.
- Liquidity on PulseX burned and locked forever and growing.
- Contracts are renounced and can't be modified.
- Community driven Dao.
- Top 100 stakers may submit proposals that fuel growth of (PTGC).
- All (PTGC) stakers may "vote" on proposals set forth by top 100 stakers of the DAO.

The Grays Currency (pTGC)

Lite Paper

Introduction - About the Grays

The Grays Currency is the answer to a severe problem. Why can the corrupt leaders profit off our taxes paid for every dollar we make and spend? What if for every dollar you spend, the taxes paid on that money went back to the community while stabilizing the currency instead of feeding their pockets? Why can corrupt leaders of earth inflate their currency and print more money as they, please? What if there was a set supply that could not be inflated which would stop the rapid devaluing of your money?

The Grays Currency Solution

The Grays have been watching, waiting, and precisely planning when to unleash the ultimate cryptocurrency: The Grays Currency (PTGC) is the first of its kind renounced, immutable, deflationary, cryptocurrency designed to generate passive income for holders without resorting to inflating the token supply. The Grays delivers the benefits of inflation without the actual inflation. The Grays is the ultimate passive income machine, while delivering token mechanics that ever increase the value of the token itself and the underlying liquidity pools that underpin it's value with hyper deflationary mechanics. (PTGC) stakers may also participate in a DAO allowing proposals and votes on treasury (PLS) allocated to further the (PTGC) mission of becoming the most valuable and liquid digital income generating asset on the Pulsechain blockchain.

Welcome to The Grays Currency!

Launched 100% Complete

(PTGC) launched complete, the smart contracts once deployed are 100% automated, there are no future promises, the code cannot be changed. There is no members of any corporation or institution, there is no mint functions to mint new tokens, there is no developer fees, and nothing is being taken off the top. This was created in very much the same spirit of Satoshi to give it away to the world.

Why Should I buy the Grays Currency you might ask:

Initial Distribution and Total Supply

The max token supply for (PTGC) is set to 333,333,333,333, with tokens being airdropped to Xen burners for (TGXen) and Current (TGC) holders on ETH. The remaining balance was burned into liquidity pools on PulseX. None of the tokens will be kept by the developers, there will be no dev fee taken from the top, and no presale prior to the launch of our mission. With (PTGC), the taxes paid on every dollar spent goes back to the Dao to stabilize the currency.

DAPP

The PulseX dapp interface will allow for trading of the (PTGC) token. Below is the link:
https://app.pulsex.com/swap?outputCurrency=0x94534EeEe131840b1c0F61847c572228bdfDDE93

On the dapp at: https://pulsechain.thegrayscurrency.com/ holders and stakers can view live analytics and historical data. Inside the dapp holders can become stakers. Stakers can view live data about their current stakes and rewards. With a current stake you access the DAO and gain voting rights for future investment of the (PLS) in the treasury wallet . Staked tokens may also be "locked" if you choose and gain additional locking rewards. Holders earn rewards just "holding". "Stakers" earn more rewards and "Lockers" may earn even more. There is no time lock requirement to stake (PTGC) however there is a minimum 90 day time lock when locking.

The Grays Currency Tax System

With every buy/sell a 5% tax is paid. None of the tax goes to dev wallets. Taxes are distributed into specific functions that support The Grays Currency. All taxes are collected in (PLS) the native coin of the Pulsechain blockchain. "Treasury" (PLS) is distributed based on passing proposals through the Dao to fund things such as but not limited to:

Locking liquidity in the core V1 (PTGC/PLS) LP on Pulsex
(PTGC) market buy & burns
Distributing rewards to holders and stakers.
Adding to the ever rising LP floor
Creating new LP's for bot arbitrage activity
Potential Collaborations
Marketing campaigns and more

The (PTGC) tax system fuels the (PTGC) token mechanic which is specifically designed so short term holders and traders actually support the long term health and ever growing value of the protocol which benefits long term holders with every buy and sell of (PTGC).

TAX DISTRIBUTION IS AS FOLLOWS:

- 2% DAO treasury wallet (Used by Dao to increase value of PTGC)
- 1% holder and staker rewards
- 1% staker rewards
- .05% (PTGC) buy and burns
- .05% (PTGC/PLS) LP on PulseX V1 (Locked Forever)

Redistributed Rewards

All (PTGC) rewards are paid out via "reflections". With each buy/sell a % is delegated to holders and stakers. The % to the stakers will be drastically more due to their support in the project. The more tokens you have staked, the more percentage of each reflection you will receive. As many trades occur holder and stakers collect rewards on every buy and sell. This turns holding and staking the (pTGC) token into a passive income machine. Locked tokens continue to receive all reflections as well.

Burn

With every buy and sell there is an auto burn function built into the smart contract. All burned tokens are sent to a dead wallet address in which they can never be sold again. Burning tokens is the same as if someone purchased them and never sold them. The Grays burn mechanics create continuous upward momentum for the project. Burning of (PTGC) will allow for it to stay deflationary while lowering the supply with every transaction. (PTGC) will started with a supply of 333,333,333,333 tokens and will decrease with each transaction.

Staking

Staking of the (PTGC) token can be performed on our Dapp: https://pulsechain.thegrayscurrency.com/staking
While many benefits can be found with staking (PTGC), one unique feature is there is no "time lock" requirement on your staked (PTGC) tokens. Additional benefits of staking your (PTCG) are you will receive significantly more rewards on trading volume than the typical (pTGC) holder who has not staked. In addition when staked with any amount your eligible to participate in the DAO allowing you to vote on proposals submitted for the use of the (PLS) in the Dao's treasury wallet. ***Your staked tokens stay in your wallet as we believe is Self-Custody.*** Note: When a stake is ended by using the "withdraw" function there is a 1% fee that gets distributed to all current stakers.

Time Locking

All (PTGC) holders have the option to stake their tokens with no time lock. However, some stakers may choose to "lock" their tokens to hedge impulse to sell during market fluctuations. To "lock" a user must have their tokens "staked" to enter a time lock.) If a staker decides to lock their tokens for safekeeping a staker has the option to time lock their staked (PTGC). Note: Tokens remain in the wallet while staked and locked. User can view tokens in the wallet but cannot sell them until a withdraw is requested**.** You will earn the following rewards for time locking your (PTGC).

All stakers who decide to lock are divided up into 10 tiers depending on the lengths of their lock. Users earn a distribution based on how much (PTGC) is staked. Depending on what "tier" users fall in, users will receive a distribution of the reward pool. If any "locker" decides to end their time lock early they are penalized 30% of the locked tokens. This penalty is then distributed to all current lockers. The amount each locker receives is based on their tier rank and locked amount of (pTGC). ***NOTE: Once locked period has ended a user may remain in the lock and continue to accumulate rewards with no penalty.***

EXAMPLES:

Example 1:
A user earns 1,000,000 (PTGC) as a reward from locking due to another locker ending their lock early. User is in tier 5 and receives 80% of the reward or 800,000 (PTGC) ready to claim. The remaining 200,000 (PTGC) will be sent to a dead address and burned never to enter circulation again.

Example 2:

A user earns 10,000 p(PTGC) as a reward from locking due to another locker ending their lock early. User is in tier 2 and receives 95% of the reward or 9,500 (PTGC) ready to claim. The remaining 500 (PTGC) will be sent to a dead address and burned never to enter circulation again.

Time locking can be initiated on the staking page at the bottom of the UI:
https://pulsechain.thegrayscurrency.com/staking

Time Lock Tier System:

- Tier 01 - **9-10 years** (for time locked) earns 100% of the reward.
- Tier 02 - **8-9 years** (for time locked) earns 95% of the reward.
- Tier 03 - **7-8 years** (for time locked) earns 90% of the reward.
- Tier 04 - **6-7 years** (for time locked) earns 85% of the reward.
- Tier 05 - **5-6 years** (for time locked) earns 80% of the reward.
- Tier 06 - **4-5 years** (for time locked) earns 75% of the reward.
- Tier 07 - **3-4 years** (for time locked) earns 70% of the reward.
- Tier 08 - **2-3 years** (for time locked) earns 65% of the reward.
- Tier 09 - **1-2 years** (for time locked) earns 60% of the reward.
- Tier 10 - **90 days-1 year** (for time locked) earns 55% of the reward.

The Grays Currency Dao

The (PTGC) DAO: https://pulsechain.thegrayscurrency.com/dao uses a token-based quorum model. For a proposal to pass, at least 65% positive feedback is required. All proposals will remain open for 7 days. Failing to get enough votes or enough positive feedback means that the proposal fails. The destination address that will receive the PLS from the DAO contract will be the address that submitted the proposal. Funds must be available for a proposal to be submitted. Only the top 100 stakers can submit proposals, but all stakers can vote on each proposal. Permissions allow for 1 open proposal at a time per wallet. The more tokens you hold, the more voting weight you have. Full voting weight is applied on every vote. A “comments” section is provided on each proposal for community discussion. The goal is for most of the proposals submitted to be relative to LP buy and burns and (PTGC) buy and burns, however some proposals can be related to marketing, LP web growth, potential collaborations and so on knowing that community growth, LP burns, token burns, and marketing go hand in hand for success. We took these 4 functions and combined them together within the DAO as the Grays believe this is the foundation of any successful project.

Liquidity

Most (PTGC) liquidity will be held in the V1 (PLS/PTGC) pair on **PulseX**. The (PTGC) smart contact will auto compound this liquidity pool with every transaction. For clarification, liquidity is the ability of an asset to be easily exchanged for another without affecting its value. (PTGC) will be paired with many of the top Pulsechain tokens. All of these pairs will continually add to the V1 (PLS/PTGC) liquidity pair via the smart contract. (PTGC) has set up a liquidity pool web effect between (PTGC) and many other assets, making many paths to move around Pulsechain for both holders and arbitrage

bots. The more LP pairs we create, the more volume we will receive and in turn this constantly adds to the (PTGC) ecosystem.

Liquidity Web

(PTGC) is designed with a liquidity pool web mechanism built into the smart contract with a very specific order in which LP's are deployed. We aim to continue to grow this LP web by constantly buying and burning LP with current LP pools and new ones as well. As this web gets bigger, we create more paths and larger paths for holders or bots to move funds around to take advantage of arbitrage opportunities. Every time a transaction is done within our web of LPs the wallet making the transaction pays a fee into the ecosystem, this fee continuously raising the floor of the ecosystem in exchange for us offering this pathway for the trader/arbitrage bot. This mechanism will continue to raise the floor of (PTGC) forever. The web that was created continues to operate at a high-volume level without any human interaction and can never be turned off as the LP pool tokens are burnt forever. The burning of these LP pools doesn't only cause a perpetual raising of the (PTGC) floor but also raises the floor of the token we are paired with. These bonds will remain forever and will continue to grow over time. What does "The Floor" mean?

If every (PTGC) that is "not" currently in the liquidity pool is sold into the pool, the resulting price of (PTGC) is the "floor". A lower price is not possible, as there is no (PTGC) left to sell. The Grays Currency is perpetually raising this floor.

Amplifier Tokens

(PTGC) does not only bond itself with other Pulsechain ecosystem projects, but also has its own set of amplifier tokens. These tokens have specific functions that benefit the (PTGC) ecosystem while also having tokenomics to benefit themselves. These amplifiers tie directly into the (PTGC) Liquidity web and are ever rising the floor of (PTGC); however, they also have their own LP web allowing constant traded amongst arbitrage bots, which greatly adds to the volume of the token without human interaction. These amplifier tokens are Burn, Liquid, 808 and ENRG. Every time an amplifier token is traded, it will directly benefit the (PTGC) ecosystem while also benefitting itself.

Liquid
-2% LP to pair (PTGC)/Liquid
-2% LP to (PLS/Liquid)
-1% pls rewards
Contract Address
0x21ee884c6c2e83e6837c77f7ff617ba947f0afe7

808
-1.5% fee to 808 wallet (for LP and buy and burns)
-1.5% fee to A34 wallet (for LP and buy and burns)
-1% Buy and burn (PTGC)
-1% LP to (PTGC/808)
Contract Address
0x50F1ca62e6Fb8Adf438ca1F50067AB83670094A6

Burn
-3% Buy and Burn
-1% LP to (PTGC/Burn)
-1% pls rewards
Contract Address
0x64a24a61330db88af5bcdf13e8da4d55ff8d96c0

ENRG
-3% LP to pair (PTGC)/PLS)
-1% LP to (ENRG/PLS)
-1% ENRG Buy and Burn
Contract Address
0x9c901c8cd58f314455695de9e3cbaa0b78460da9

Closing Remarks

In closing "The Greys Currency" is a fully automated, decentralized digital asset that offers unrivaled token mechanics all designed with the sole purpose of increasing the (PTGC) token "price", while more importantly increasing the value of the underlying "liquidity pools" that allow people to take profits. There is no benefit to an increase in a tokens price if holders can't sell due to underfunded liquidity pools.

In addition, the ability to offer a true passive income to holders without resorting to inflating the token supply is very powerful. In fact (PTGC) is a hyper deflationary asset always becoming scarcer and by default increasing the floor of its own liquidity pools.

Giving holders the ability to earn a passive income without time locks provides liquid flexibility and freedom to use your crypto when and how you choose. A deflationary token, backed by an ever-growing network of deep liquidity pools, with the primary LP being PLS. With every buy and sell (PTGC) is being removed from the circulating supply forever.

As of today 11-18-2023, the mechanics of (PTGC) has already created a core liquidity pool with over 1.5 Billion PLS in it paired with (PTGC) and adding 500-1 Billion PLS to the pool every 14 days. This can go up or down based on volume. Current market cap at time of writing this is 2.81 Million with $180k in the core LP and a total of approx. $500k in total liquidity across all LP pair. All this only 5 weeks from launch.

Welcome to "The Grays Currency" a first of its kind, reverse engineered crypto currency, for the people, by the people, original ETH deployed protocol was audited by **Solid Proof** with full transparency. There was only a few lines of code altered to accommodate for deployment of The Grays Currency on Pulsechain.
